Loading Capacity:	2 shower containers per standard trailer Equivalent to 20 shower stalls

Applications

Our extremely sturdy Shower Containers have been custom-designed by eps for large multi-day events, such as festivals and sporting tournaments. They are particularly well-suited for use in campgrounds and backstage areas.

Features

Each shower container is made up of twelve individual stalls separated by dividers and curtains. To ensure an ample hot-water supply, each container is outfitted with two water heaters with 500 liters capacity per unit. The modules also feature ribbed aluminum flooring and drains, which ensure a dry, slip-proof surface, as well as electric heaters, sinks, and mirrors. Shower containers can be easily unloaded and positioned using a forklift.

Optional Extras

If there is no water supply or sewage system on site, we offer portable solutions, such as holding tanks. We also offer planning, transportation, connection services, and pump-truck disposal, as well as cleaning during and after the event.
