

GIGS IO Gate

The new security revolution from your global leader for crowd control solutions

ACCESS & EXIT – ALL IN ONE

The GIGS In/Out (IO) Gate is a unique system that connects an entrance and emergency exit at the same time. Constructed as a security double line-up gate, it enables controlled and secure audience entrance at any type of event. Due to its dual function, the pioneering GIGS IO Gate can become a reliable emergency escape route within less than one second.

AUTOMATED SOLUTION

The central sliding handrail is unlocked at the push of a button and automatically relocates to the side. The GIGS IO Gate opens to the full width of 1.2 meters (47.2 in) to become an emergency exit, compliant with the latest safety regulations. The optional integrated table also folds down automatically when the gate is unlocked.

HIGHLIGHTS

- A unique system that connects an entrance and emergency exit all in one
- Secures audience access at any type of event
- Can become automatically a reliable emergency escape route within less than one second

CUSTOMER BENEFITS

- Saves both time and personnel, since rigid entrance systems do not have to be dismantled
- Sustainably produced at eps' own production facility in Italy
- Compatible with the GIGS series, it guarantees extreme flexibility, high stability and safety
