

CONCERT TOURING EQUIPMENT

Concert Touring Equipment

Applications

We offer professional-level tour equipment for catering and backstage areas. All our products – from fans to refrigerators – are delivered in custom-made road cases that are optimized both to protect against damage, and to ensure ease of loading. All electrical units are plug-and-play and can be provided with voltage converters dependent upon requirements.

Features

Refrigerators and freezers are available in several sizes and offer storage space for a multitude of food and beverage requirements. The units feature refrigeration control, interior lighting, and condensation drainage.

Our twin-basin, stainless-steel sinks feature an ample counter to expedite the washing of large quantities of crockery. Along with integrated water heaters, freshwater and grey-water connections. We also feature handwashing basins with integrated waste-water

outlets constructed from robust alloy steel and featuring integrated water heaters.

Our air-circulation fans improve air condition and temperatures on warm and humid days. They are stable, height-adjustable, and low-noise, and come with four speed settings.

Indispensable for every event are our class B, carbon-dioxide (CO₂) and ABC powder fire extinguishers, which meet all industry safety standards.

Optional Extras

- First-aid kits meeting DIN 13169 standards
- Cable, cable drums and adapters
- Waste bins, brooms and much more
- Consumables such as cable straps and gaffer tape
- A range of service equipment to suit the needs of every size of tour, from full kitchen suites to single items of furniture, and heating systems.
