

PRODUCTION VEHICLES

Production Vehicles

Navigate large event areas easily, quickly and comfortably

Applications

Reduce the time spent traveling around your event site, and transport artists and VIPs safely and comfortably with eps's Production Vehicles. We offer eps and Gator brand utility vehicles that are suitable for off-road use, as well as difficult and muddy terrain.

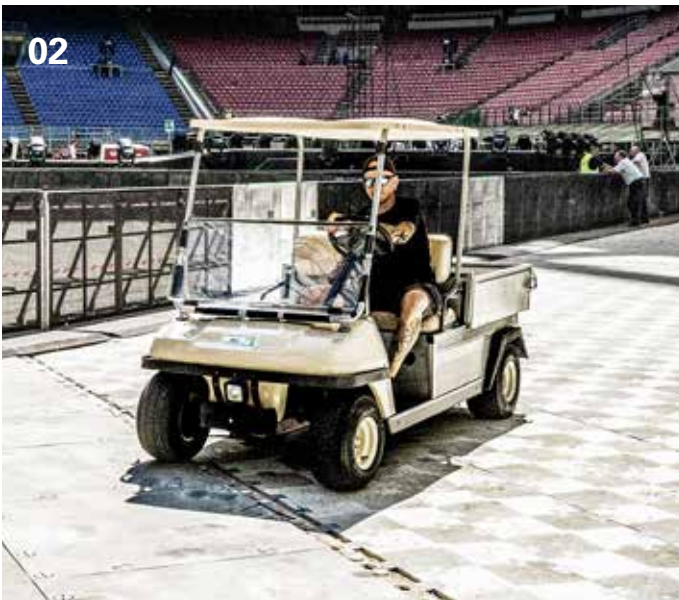

The eps fleet includes the following vehicles:

- Gators
- Golf carts with 2, 4 or 6 seats
- Golf carts with utility flatbeds

Production Vehicles are delivered in customized transport racks or secured with tension belts on pallets. If no forklift is available, we can organize delivery with a loading ramp. Transportation to and from your site can be coordinated with other eps rental equipment for maximum efficiency.

Optional Extras

Upon request, we can supply street-legal permits and insurance so that your rental fleet can be used on public roads (with a valid driver's license). Many of our vehicles are equipped with a ball-mount trailer hitch. When used with eps trailers, they can easily transport material or personnel. Both electric and fuel-powered vehicles are available.

01 Production Vehicles are suitable for production managers, site coordinators and mobile emergency teams at major events | 02 Golf Carts are electrically powered and are available in two-, four- or six-seater models | 03 Robust, practical and all-terrain- the Gator can also be used on narrow paths such as a festival site | 04 eps's fleet of Production Vehicles can be used to easily transport working materials to remote and hard-to-reach locations
