Supa-Trac

Supa-Trac

A flexible turf and ground protection system for all types of pedestrian access

Material:	Polypropylene copolymer
Dimensions (l × w × h):	0.91 × 0.225 × 0.035 m per element (36 × 9 × 1.4 in) 2.745 × 1.145 × 0.035 m per unit (cover) (108 × 45 × 1.4 in) 2.80 × 1.195 × 1.17 m per palette (loading) (110 × 47 × 46 in) 2.50 × 1.20 × 0.12 m (palette size) (98 × 47 × 5 in)
Weight:	Approx. 2.18 kg (4.8 lbs) per element Approx. 32.70 kg (72 lbs) per unit
Color:	White
Accessories:	Ramps
Transport:	16 special pallets à 30 units per standard trailer Approx. 1,508.64 m² (16,238.87 ft²)

Applications

Supa-Trac is a temporary pitch covering system for protecting football fields, golf courses, and other sensitive surfaces.
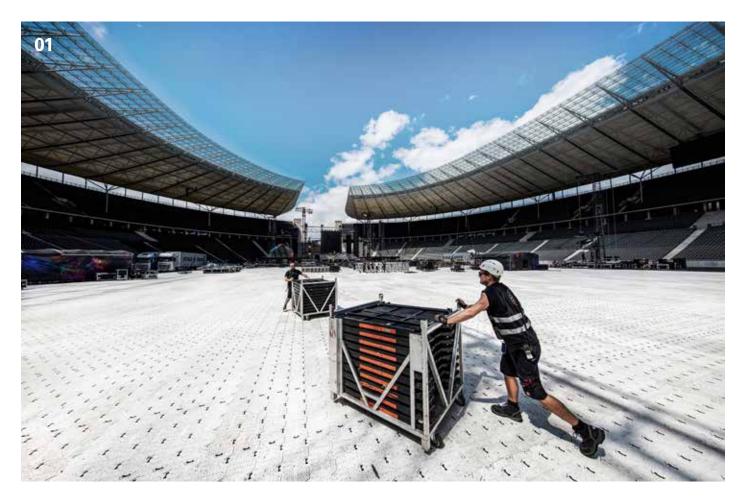

Features

Supa-Trac is slightly perforated, allowing light, air and water to reach the ground below. Depending on the the type of ground, Supa-Trac can be left in place for up to five days without damaging the underlying turf and soil. Supa-Trac comes with a patented locking system. To disassemble, all that is required is a standard screwdriver, for unlocking the sections. Thanks to special connectors between each element, Supa-Trac flooring is flexible and can adapt to slightly uneven surfaces. One Supa-Trac unit cconsists of 15 elements, that can be quickly and easily layed by teams of two.

Optional Extras

eps also offers delivery, installation, dismantling, cleaning, and collection. Upon request, we can also provide panels in non-standard sizes, and supply yellow or black ramps.

01 Supa -Trac is supplied in pre-fabricated layers of 15 which facilitates rapid installation | **02** The turf protection system is ideally suited for open-air concerts, stadiums or other large events with high spectator numbers | **03** Depending on weather conditions, Supa-Trac can protect turf from external influences for up to five days | **04** Supa-Trac's surface is permeable by light, water and air
