** specs pertain to center sections; dimensions and weight of ramp elements available upon request

Applications

Our sturdy, trip-proof cable-protection systems allow cables and wires to be run safely through areas frequented by pedestrians, wheelchairs, and vehicles. They are ideal for outdoor events, construction sites, factories, and film or TV productions.

Features

Standard Systems

All three cable-protection systems feature five ducts and are extremely sturdy and easy to assemble. The cable protector models are made of polyurethane, and are oil, acid, and fuel resistant.

Defender XXL

The Defender XXL features extra-wide ducts, which are ideal for running power cables or fire hoses.

Expandable Systems

The modular systems are expandable. Each basic element has three to five channels and can be connected to other base elements. May be included any number of cables. To allow barrier-free access, special flat ramps can be delivered.

Optional Extras

In addition to standard cable runs, we offer special elements for unusual configurations, such as corners or intersections. We can also arrange transportation, installation, and breakdown.

Cable Protectors

On-site applications

Cable protectors, Hurricane Festival, Scheessel, Germany

An inside view of a multi-channel cable run during installation

The expandable Yellow Jacket AMS System

The RedFloor system allows, in combination with appropriate special elements, particularly shallow junctions

Securing cable runs through the audience
