

# Hexagon

A universal ground cover for uneven or irregularly shaped surfaces

Material	recycled plastic
Dimensions	square measure: 0.27 m <sup>2</sup> (2.9 ft <sup>2</sup> ) edge length: 0.32 m (13 in) height: 0.04 m (2 in)
Weight	approx. 3.20 kg (7 lbs) per tile
Color	white, charcoal or grey
Accessories	PE foil, Geotextile
Transport	up to 16 pallets (1,030.00 m <sup>2</sup> /11,087 ft <sup>2</sup> ) per standard trailer

## Applications

Hexagon interlocking tiles are ideal for footpaths and exhibition flooring, as well as for covering uneven or irregularly shaped surfaces. Depending on the consistency of the underlying ground, they can also be used for temporary roads and parking lots for vehicles weighing up to two tons.

## Features

The hexagonal shape of the tile allows it to conform to angles of 30°, 60°, and 90°, making it ideal for covering asymmetrical areas. Tiles are laid manually and interlock for stability.

## Optional Extras

We offer delivery, installation, and pick up. For sensitive or muddy surfaces, we can also supply a PE foil or Geotextile underlay.

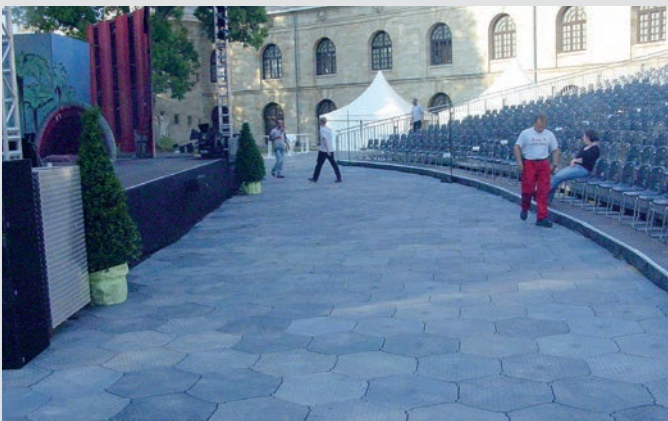

# Hexagon

## On-site applications

*A Hexagon tile footpath*

*Hexagon tile surrounding a stage front*

*A Hexagon walkway at a Home and Garden exhibition*

*The Popemobile on a temporary Hexagon road, World Youth Day 2005, Cologne, Germany*

*Hexagon tiles surrounding a catering trailer – just one example of the flexible installation options*
