

Plastic Chair

Plastic Chair

Lightweight and weather-resistant seating for open-air events

Applications

The Plastic Chair is primarily used at large outdoor events such as open-air concerts. Its lightweight nature allows for quick seating arrangements for large audiences. However, the white garden chair also looks great at weddings held outdoors. The airy design and weather-resistant material are suitable for both sunny weather and rain.

Features

The chair is made of plastic, giving it its durable, weather-resistant, and easy-to-maintain qualities. Additionally, it is extremely lightweight and stackable. These features create optimal conditions for space-saving loading, efficient transportation, and easy setup and dismantling. In addition to its ergonomic shape, the slits and cutouts on the seat and backrest provide excellent seating comfort - particularly

enjoyable on hot days. At the same time, rainwater can easily drain off in this way.

Optional Extras

Waterproof seat and row labels, as well as block signs, are available as optional accessories. Upon request, we can provide comprehensive services such as transportation and setup and dismantling work. We are also happy to create CAD-based seating plans to ensure optimal use of the event space and compliance with safety regulations.

01 All set for the sounds of rock: Seating for the Bon Jovi concert at the Suncorp Stadium in Brisbane, Australia | **02** With the lightweight Plastic Chair, large row seating arrangements can be quickly set up, as seen here at an Icehouse concert at the Don Lucas Reserve in Australia | **03** When Midnight Oil performs at Commonwealth Park in Canberra on Stage 88, the plastic chairs with their airy design provide excellent comfort- even rock bands are experiencing the trend of seated concerts | **04** Even major music legends have opted for the white garden chairs: Seating for a Pavarotti concert in New Zealand
